

HYALINE ENVIRO ENGINEERS PVT. LTD.

INDUSTRIAL SEGMENT WATER & WASTE WATER TREATMENT

Hyaline Enviro Engineers Pvt Ltd. is an Indian environmental engineering company specializing in water and wastewater treatment solutions. The company designs, manufactures, supplies, and maintains systems for industries, ensuring efficient water management in full compliance with Pollution Control Board (PCB) norms and environmental regulations.

We also undertake CFE and CFO liaising and certification.

Stripper Column: Hyaline Enviro Engineers provides stripper column systems to remove volatile contaminants such as ammonia and solvents from industrial wastewater. These systems improve effluent quality and ensure compliance with environmental discharge norms.

UF + RO1 + RO2 / EDI: systems provide advanced multi-stage water purification for industrial use by removing suspended solids, dissolved salts, minerals, and impurities through membrane and electro-deionization technology. These systems deliver consistently high-purity water suitable for boilers, process applications, pharmaceuticals, power plants, electronics, and other critical industrial operations.

MEE (Multiple Effect Evaporator):

Hyaline Enviro Engineers designs and supplies high-efficiency Multiple Effect Evaporator (MEE) systems for industrial wastewater management. MEE systems recover reusable clean water by evaporating wastewater in multiple stages, while concentrating dissolved solids into a manageable residue. These systems are widely used in ZLD applications, helping industries reduce freshwater consumption, minimize waste, lower operating costs, and achieve strict environmental compliance.

ATFD (Agitated Thin Film Dryer): Hyaline Enviro Engineers offers ATFD systems that convert concentrated industrial effluent into dry solid waste, enabling easy handling, safe disposal, and complete ZLD compliance

HSTP (Sewage Treatment Plant) Treats domestic sewage using biological and filtration processes to remove contaminants. Produces treated water suitable for reuse or safe discharge as per environmental standards.

HETP (Effluent Treatment Plant): Designed exclusively for industries, an ETP treats industrial wastewater using physical, chemical, and biological processes to remove pollutants, ensuring treated water is safely reused or discharged in compliance with pollution control norms..

Zero Liquid Discharge (ZLD): is an industrial wastewater treatment system that ensures complete recovery and reuse of treated water, with no liquid effluent discharged. The remaining dissolved solids are converted into dry salts for safe disposal, helping industries conserve water and meet environmental norms.

HEAVY FABRICATIONS

FABRICATION DIVISION

Hyaline Enviro Engineers Pvt Ltd offers comprehensive heavy fabrication and fabrication division services for commercial and industrial applications, including SS/MS tanks, structural fabrication, piping, pressure vessels, filter vessels, and equipment skids. We ensure high-quality workmanship, durability, and precision manufacturing to support water treatment, utility, and process systems.

Boiler Feed Water Tanks: Store and supply treated water to boilers in commercial and industrial buildings. Ensure continuous, safe, and efficient boiler operation by maintaining proper w Boiler Feed Water Tanks: Hyaline Enviro Engineers design and fabricate boiler feed water tanks for industrial applications, ensuring reliable storage and supply of treated water to boilers. These tanks support continuous, safe, and efficient boiler operation by maintaining proper water quality, pressure, and system stability. ater quality and pressure.

FGDC (Flow Gap Dissolved Air Flotation Clarifier):

Used in commercial and industrial wastewater treatment to remove suspended solids, oils, and grease. Enhances water clarity and prepares effluent for further treatment or reuse.

SS 310 Heat Treatment Basket: Made of high-quality SS 310 stainless steel, these baskets are used in commercial and industrial heat treatment processes to hold components safely. They ensure uniform heating, durability, and resistance to high temperatures and corrosion. Made from high-quality SS 310 stainless steel, these baskets are used in heat treatment and quenching applications to securely hold components during rapid heating and cooling.

They offer excellent resistance to high temperatures, thermal shock, and corrosion, ensuring durability and uniform heating and quenching.

Reactors: Hyaline Enviro reactors are specialized tanks designed for industrial water and wastewater treatment.

They support chemical, biological, or hybrid processes to ensure efficient pollutant removal and optimized treatment performance. Engineered for durability and precise process control, these reactors improve operational efficiency, reduce downtime, and help industries meet stringent environmental regulations.

STP/ETP Structure Tanks: Robust tanks designed by Hyaline Enviro for industrial sewage and effluent treatment processes. Engineered for strength and durability, these tanks offer excellent resistance to corrosion and harsh wastewater environments, ensuring safe, efficient, and reliable treatment with long service life.

Air Receiving Tanks: Air receiving tanks designed by Hyaline Enviro Engineers store and regulate compressed air for industrial applications. They ensure consistent pressure, efficient system operation, and protection of pneumatic equipment.

Quenching Tanks: Quenching tanks by Hyaline Enviro are used in industrial processes to rapidly cool heated metals or components. They ensure controlled cooling, prevent thermal damage, and help maintain material quality.

Pre-Engineered Building (PEB) structures by Hyaline Enviro offer durable, cost-effective, and quick-to-install structural solutions for industrial applications. Designed with precision engineering, these structures ensure high strength, long service life, and efficient use of materials while supporting rapid construction and reliable performance.

SS 316L Storage Tank Hyaline Enviro reactors are specialized tanks designed for industrial water and wastewater treatment. They support chemical, biological, or hybrid processes to ensure efficient pollutant removal and optimized treatment performance. Engineered for durability and precise process control, these reactors improve operational efficiency, reduce downtime, and help industries meet stringent environmental regulations..

Filter Vessels: Hyaline Enviro filtration vessels are durable tanks designed to house filtration media for removing suspended solids, sediments, and impurities from water. They ensure clean, safe, and high-quality water for industrial applications, offering reliable performance and long-lasting service.

TURNKEY PROJECTS

Hyaline Enviro Engineers Pvt Ltd offers comprehensive turnkey project solutions for commercial and industrial applications, including fire-fighting systems, utility SS/MS piping works, heat exchangers, cooling towers, process piping, compressed bio-gas (CBG) piping, nitrogen plants, and PSA oxygen plants. We deliver end-to-end execution with high-quality workmanship, reliability, and efficient project management to support water treatment utility

Fire Fighting Works: Comprehensive systems including pumps, hydrants, sprinklers, and alarms for commercial buildings. Ensure safety of life and property while complying with fire safety regulations.

Utility SS/MS Piping Works: Installation of stainless steel (SS) and mild steel (MS) pipes for water, wastewater, and utility systems in commercial buildings. Ensures safe, durable, and efficient fluid transportation throughout the facility.

Heat Exchangers: Equipment used in commercial and industrial buildings to transfer heat between fluids efficiently. Ensure energy savings, temperature control, and optimized system performance.

Cooling Towers: Remove excess heat from water used in commercial and industrial systems by transferring it to the atmosphere. Ensure efficient cooling, energy savings, and optimal operation of HVAC and process equipment.

**CBG | SOLAR PLANT PROJECTS | PIPING | COOLING TOWERS
HEAT EXCHANGER | MS-SS PIPING | FIRE FIGHTING WORKS**

Process Piping: Network of pipes designed to transport water, chemicals, or other fluids within commercial and industrial systems. Ensures safe, efficient, and reliable operation of process and utility equipment.

Compressed Biogas (CBG) Plants: Convert organic waste into renewable energy by producing compressed biogas for commercial and industrial use. Promote sustainable energy, waste management, and environmental responsibility

Nitrogen Plants: Generate high-purity nitrogen for commercial and industrial applications such as food packaging, electronics, and chemical processes. Ensure a reliable, efficient, and cost-effective supply of nitrogen gas.

PSA Oxygen Plants: Produce high-purity oxygen using Pressure Swing Adsorption (PSA) technology for commercial, medical, and industrial applications. Ensure a continuous, reliable, and efficient supply of oxygen on-site.

Solar Plants Projects: Undertakes solar power plant projects, providing efficient and sustainable energy solutions for industrial and commercial applications. The company designs, supplies, installs, and commissions solar systems to reduce energy costs and promote renewable energy usage in compliance with applicable standards and regulations.

TRADING DIVISION

Our Trading Division is engaged in the supply of a comprehensive range of water treatment products, including specialty chemicals, RO/UF membranes, dosing pumps, transfer pumps, and other allied accessories. We focus on sourcing reliable, high-quality products from trusted manufacturers to meet the requirements of industrial and commercial water treatment systems. With a strong emphasis on quality assurance, competitive pricing, and timely delivery, our trading division supports smooth plant operation and long-term performance for ETP, STP, RO, and UF applications

RO Membranes

High-performance membranes used for removing dissolved salts, impurities, and contaminants, ensuring purified water for industrial and commercial applications

UF Membranes

Ultrafiltration membranes designed to remove suspended solids, bacteria, and viruses, providing superior pre-treatment for RO systems.

Resins

Ion exchange resins used for softening and demineralization, effectively removing hardness and dissolved ions from water.

Lamella Clarifier

Advanced settling system designed for efficient removal of suspended solids using inclined plate technology.

Dosing Pumps

Precision pumps used for accurate chemical dosing in water treatment processes, ensuring controlled and efficient operation.
DOSING PUMP, MAKE EDOSE, MILTON ROY, UKL

Pressure Vessels

Durable vessels designed to house membranes and filtration media, built to withstand high pressure in water treatment systems.

Rotameters

Flow measurement devices used to monitor and control liquid flow rates in pipelines.

Filter Vessels

High-quality vessels used for filtration processes, ensuring removal of suspended impurities and turbidity.

Activated Carbon

Highly porous material used for removing odor, color, chlorine, and organic impurities from water.

Antiscalant

Specialty chemical used to prevent scaling and fouling in RO membranes, enhancing system life and efficiency.

Sodium Meta Bi Sulphate

Chemical used for dechlorination in water treatment systems, protecting RO membranes from chlorine damage.

PH Booster

Chemical used to increase and maintain optimal pH levels in water treatment processes.

Plate Type Heat Exchanger (PHE)

Efficient heat transfer equipment designed for optimal thermal performance in industrial processes with compact design and easy maintenance.

Chlorine Test Kit & Hardness Test kit

Hardness and chlorine test kits are used to check important water quality parameters. They help monitor scaling tendency, disinfection levels, and overall water safety in treatment systems.

Hyaline Enviro Engineers is supported by a strong team of over 100 skilled professionals and well-trained operators with hands-on experience in water and wastewater treatment systems. Our team is committed to delivering reliable, efficient, and cost-effective solutions through disciplined operations, proactive maintenance, and strict quality control. By combining technical expertise with practical field knowledge, we ensure consistent performance, regulatory compliance, and economical service delivery without compromising on safety or quality.

Hyaline Enviro Engineers Pvt Ltd. is an Indian environmental engineering company specializing in water and wastewater treatment solutions, with a strong presence in commercial building services. The company focuses on designing, manufacturing, supplying, installing, and maintaining STP, WTP, UF, and RO systems, along with hydropneumatic systems, pumps, and fire-fighting systems.

We support Residential Complexes, Commercial Buildings, and Public Utilities in managing water, sewage, and effluents efficiently and in an environmentally responsible manner.

Hyaline STP systems treat wastewater from offices, malls, hotels, and other commercial buildings, ensuring safe discharge or reuse in compliance with environmental regulations. These systems incorporate advanced technologies such as MBR, SBR, and MBBR—MBR for compact layouts and high-quality reuse, SBR for handling variable flow conditions, and MBBR for efficient and stable biological treatment—delivering reliable performance and sustainable water management.

RO (Reverse Osmosis): Hyaline Enviro provides advanced RO systems that remove dissolved salts, minerals, and impurities using membrane technology, supplying high-quality purified water for commercial building and industrial applications.

Hyaline STP systems treat wastewater from offices, malls, hotels, and other commercial buildings, ensuring safe discharge or reuse in compliance with environmental regulations. Hyaline STPs incorporate advanced technologies such as MBR, SBR, and MBBR—MBR for compact layouts and high-quality reuse, SBR for variable flows, and MBBR for efficient and stable biological treatment—delivering reliable performance and sustainable water management.

UF (Ultrafiltration): Hyaline Enviro Engineers provide UF systems for buildings that remove suspended solids, bacteria, and fine colloidal particles using membrane filtration, improving water clarity and serving as an effective pre-treatment for RO systems

Hydropneumatic Systems / Pumps: Hyaline Enviro Engineers provide hydropneumatic systems for high-rise commercial buildings, maintaining constant water pressure using pumps and pressure vessels, and ensuring an efficient, reliable water supply without the need for overhead tanks.

Fire Fighting Systems: Hyaline Enviro designs and installs fire fighting systems for commercial buildings, incorporating pumps, hydrants, sprinklers, and alarm systems to detect, control, and suppress fires, ensuring the safety of life and property while complying with statutory fire safety norms.

Hotwater Systems & Heat Pumps:

Hot water systems supply heated water for daily domestic needs like bathing, cleaning, and kitchen use. Heat pumps efficiently heat water by extracting heat from the surrounding air, consuming less electricity than traditional heaters.

Together, they provide a reliable, energy-saving, and eco-friendly solution for residential hot water needs.
